

## Water Treatment on June 23, 2014

Due to inadequate coverage of the Renovate OTF in the south bay of the lake during the initial treatment on June 4, 2014, PLM returned on June 23, 2014 and treated with liquid Diquat Dibromide, chemical trade name Tribune, in order to knock out the remaining Milfoil on Cedar Lake. The original treatment of Renovate OTF was not applied close enough to the shoreline, the fear being that the granules would get on peoples piers, docks, & boats. The following restrictions apply for Tribune in the treated area:

<b>Chemical product/active ingredient</b>	<b>Chemical trade name</b>	<b>Do Not Use this water for swimming or bathing until</b>	<b>Do Not Use this water for ornamentals or turf irrigation until</b>	<b>Do Not Use this water for domestic purposes or agriculture irrigation until</b>	<b>Do Not Use this water for livestock watering or similar purposes until</b>
Diquat Dibromide	Tribune	1 Day(s)	3 Day(s)	5 Day(s)	1 Day(s)

For a complete listing of all product labels, please see the [PLM website](#).

The chemicals used for Aquatic Nuisance Control are registered by the U.S. Environmental Protection Agency and the Michigan Department of Agriculture. The potential for damage to fish and other non-target organisms is minimal provided that the product is used as directed on the product label and the permit. To minimize the possible effects on health and the environment, the treated water is restricted for the above purposes.

The areas of the lake that were treated are shown on the map below:

<b>Cedar Lake</b>
269 Surface Acres
VanBuren Couty Porter Township
